OPERA II

**S O F T W A R E F O R
E V O L V I N G B U S I N E S S E S**

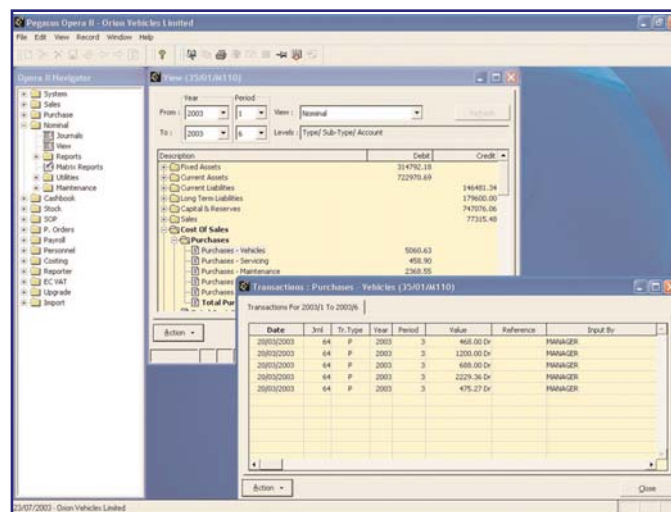

Today it is more apparent than ever that in order to keep pace with the rapid changes in the way that business is carried out — and to take full advantage of every opportunity — companies are increasingly reliant on Windows and Microsoft-based applications, networking, E-mail and the Internet.

Pegasus Opera II is fast becoming the business and accounting system of choice for small to medium-sized enterprises. The reason is simple: Opera II delivers a real competitive edge.

ADAPTABLE TO CHANGE

The success of Pegasus Software as a leading supplier of accounting, payroll, manufacturing and eCommerce solutions is primarily due to the development of applications that can adapt to the changing demands of its customers' businesses. Pegasus Opera II is a prime example. A modular solution, Opera II enables businesses to select the components that match their current business model, whilst making it possible to add further functionality as their requirements change. This means that the capability or capacity of a system can be seamlessly expanded while safeguarding the investment.

IMPRESSIVE FUNCTIONALITY

£ vs functionality — Pegasus Opera II represents exceptional value for money. It is attractively priced and feature rich, so a business can realise an instant return on its investment.

Whether it's Multi-company, Multi-currency, Multi-warehouses or Multi-dimensional Nominal, Opera II provides all the functionality a progressive business requires. This includes eCommerce Web Trading, comprehensive security facilities, VAT100 Reporting, Cash Management facilities, Budgeting, Price Lists, Discount Matrix, Nominal Consolidation and definable Management Reports. Opera II is also E-mail and Internet enabled, so statements, remittances, sales/purchase documents and even reports can be E-mailed to customers, suppliers or employees.

The Opera II Payroll and HR solution has also been revolutionised. Working closely with the Inland Revenue (IR), Central Government and existing customers, the Opera II Payroll and HR solution is second to none. It was the first professional application to gain IR approval for eSubmission (EOY Returns) and has been significantly enhanced for IR accreditation.

LOOK AND FEEL

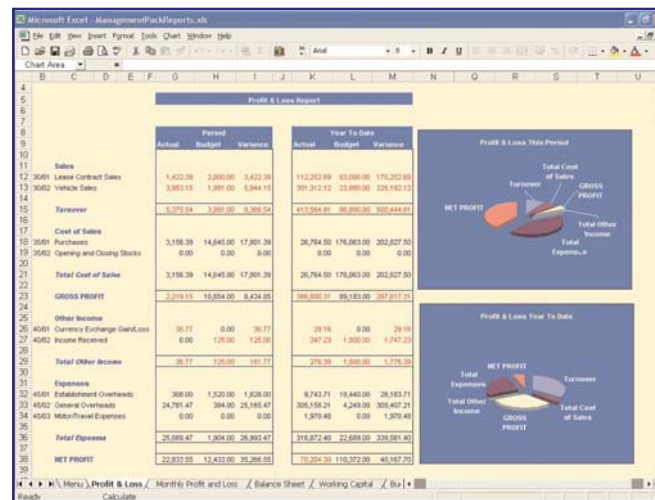

Like all Pegasus products, Pegasus Opera II has been designed with ease of use in mind. Users can elect to use a customisable slider bar, drop down menus or a tree view similar to Microsoft Explorer. The forms in Opera II have been designed with clarity in mind, offering the ability to configure security and system preferences for each user.

TODAY'S TECHNOLOGY

The open architecture of Pegasus Opera II allows more information to be processed simultaneously, multi-tasking and greater utilisation of hardware and operating systems. The additional benefit of Transaction Processing provides even greater resilience against hardware or network failure and the kind of robust data integrity usually found in much larger systems.

ANALYSE AND PREDICT

The ability to analyse business facts and identify developing trends in business is crucial. Such information can enable a company to make timely decisions that can have a direct impact on profitability. Extensive and definable analysis and reporting in Opera II allows the production of dynamic view screens and reports which can be acted upon: they can be concise, offer a snapshot view, or be as detailed as required.

OPERA II XRL: SOPHISTICATED FINANCIAL REPORTING

Opera II XRL (eXcel Reporting Layer) is an intuitive addition to the capabilities of Microsoft Excel. It provides access to the financial information held within Opera II, enabling powerful reporting and presentation capabilities.

Flexible, easy to use, with drilldown facilities, Opera II delivers fast and accurate information. Purpose-built functions allow dynamic access to data from the Opera II financial modules to populate Excel worksheets; plus any Nominal Ledger budgets prepared in Excel can be written back into Opera II, eliminating the need to re-key.

Ultimately, Opera II XRL saves time and provides better, faster and more widespread access to information.

PEGASUS INSTANT MESSENGER

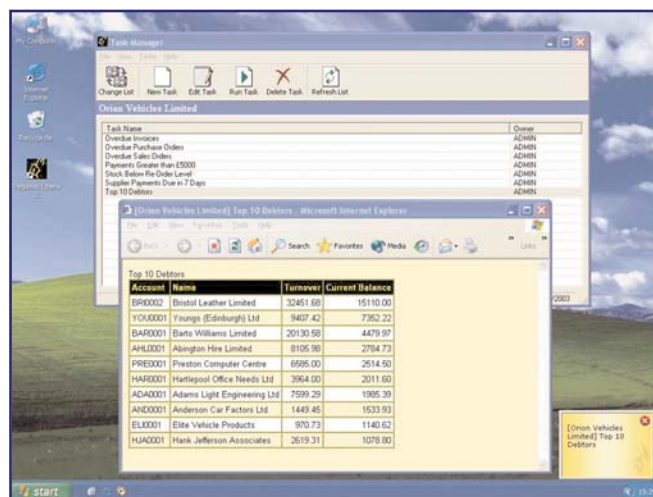

Businesses are becoming more and more reliant on their systems to perform to their maximum efficiency. Opera II does this and much more: it is a proactive solution, which enables information to be distributed automatically to the relevant recipients in the form of an instant message.

This easily configurable facility provides organisations with the ability to quickly define, via a user-friendly wizard, business rules or criteria which can be monitored on a periodic basis. When a business rule is broken or certain criteria met, a user definable message is sent automatically to the relevant recipients on the network alerting them to the information in a pop-up window. Alternatively, a text or HTML format E-mail can also be sent.

Providing dynamic information in this format puts employees in control and allows more informed business decisions to be made.

Examples of Tasks:

- Escalate overdue invoices to the Credit Control Manager
- Monitor stock levels dynamically to enable the Purchase/Production Manager to operate a 'just in time' approach to stock
- Warn the Budget Holders of accounts which are outside the budgetary control thresholds

CUSTOMISATION FACILITIES

Pegasus Opera II is fully Windows compatible, with an easy familiarity in both appearance and navigation. The Developers' Toolkit makes it easier still, allowing customisation to fit more closely with the way a company does business or to fulfil any special requirements.

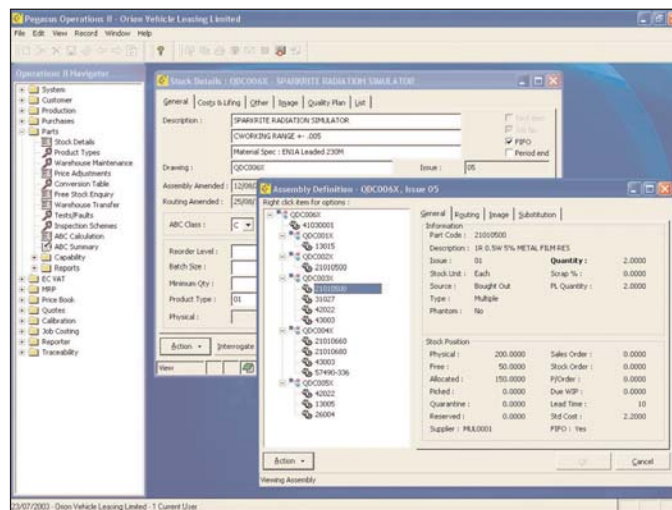

- Customise forms (screens): remove fields, add new fields, add new tab frames, add buttons and change the description of fields
- Put conditions (database rules) on fields: for example, make fields mandatory, prevent fields being edited or enforce certain conditions, such as ensuring that the individual using the form cannot change the selling price, or that a price is not edited below a certain margin
- Add items to Opera II menu structures (new functionality or external applications) — navigator, pull down menus, modify the toolbar — and take full advantage of the Pegasus Opera II security model

INTEGRATED MANUFACTURING: OPERATIONS II

For manufacturers it is clear that having an accounting solution that is independent of other operational requirements and processes is no longer acceptable. Pegasus provides the ideal solution: Opera II and Operations II seamlessly integrate accounting with manufacturing.

Operations II delivers a wealth of functionality including Multi-company, Multi-currency and Multi-level Bill of Materials, providing the breadth of functionality required by manufacturers with complex needs. This includes facilities such as WIP & Shop Floor Management, Sub Contractors, Costing and MRP

Why Pegasus Opera II and Operations II? It's simple: both products deliver a genuine competitive edge. Using the latest technologies, they address the real issues faced by the order processing, production and finance departments and will consistently add benefits to organisations looking for an advantage in today's competitive market.

ARCHITECTURE

Microsoft Visual Studio ■ Windows 2003/2000 Server ■ Citrix Metaframe XP (Standard Edition) ■ Novell Netware ■ Windows XP/2000 Professional ■ Modular

FINANCIAL MANAGEMENT

Multi-currency ■ Multi-company ■ Definable Chart of Accounts ■ Definable Accounting Periods ■ Comprehensive Drilldown ■ Nominal Dimensions — Cost Centres, Departments and Projects ■ Payroll/HR ■ Optional link to Pegasus Operations II manufacturing solution

INFORMATION MANAGEMENT

Definable Management Reports ■ Opera II XRL ■ Pegasus Instant Messenger ■ Security controlled by Opera II Security Manager

TAILORING AND INTEGRATION WITH OTHER SYSTEMS

E-mail and Internet Enabled ■ OLE — Object Linking and Embedding facilities ■ Output to MS Excel and MS Word ■ System-wide preferences per user ■ Developers' Toolkit for customisation requirements
